

NOx Sensor

suitable for: Mercedes-Benz

replaces
000 905 0008

NOx stands for the most important nitrogen oxides, namely nitrogen monoxide (NO) and nitrogen dioxide (NO₂), and consists of the atoms N (nitrogen) and O (oxygen). NOx sensors measure the concentration of oxygen and nitrogen oxide in the composition of the exhaust gas and can be located behind and in front of the SCR catalyst. They make it possible to check the functionality of the exhaust gas cleaning system and determine exactly when maintenance should be performed or when defective components need to be replaced.

The NOx sensor from DT Spare Parts convinces in particular with its high-quality processing with regard to cables and plugs as well as reliable temperature insulation.
